Sub: Vision of India in space

Dear Sir

As a patriotic citizen of India and a space enthusiast, I would like to express my gratitude for the incredible work you have done. Every Indian today feels a sense of pride because of the valiant and unparalleled achievements of our own scientists at ISRO.

I aspire to be an ISRO scientist and have vision of India in space which I would like to share with you. As the world is at the dawn of a NEW SPACE AGE, we Indians must rise to explore the universe and know more about life. India must stand up to the world. We must be strong in Space Power and reach for new heights and reveal the unknown for the benefit of mankind. I envision our country to create a thriving MARS colony as a place safe for humanity in case of a catastrophic event on Earth, such as a nuclear war or any artificial intelligence coup. Undoubtedly, our country has achieved many milestones in space. So, I foresee India to send humans into space using its own rockets. **I dream Indian astronauts to be popular as Vyomanauts (This is a Sanskrit word, 'vyoma' means sky)** as US spacefarers are known as astronauts, while Russian ones are referred to as cosmonauts. I am quite confident that India will climb the ladder of success with its savvy and sagacious team of scientists who are striving to make life in space a reality in its upcoming missions like:

- India's own space station
- Aditya L1 mission
- Mangalyaan 2
- Chandrayaan 3
- Gangayaan
- Shukrayaan
- Explorat

I presage vyomanauts to be the most triumphant in space exploration where they can help mankind to meet the challenges and safeguard the Earth by monitoring the motion of asteroids. They will indubitably win the race and be the first to find out answers of many questions like martian gravity, black holes, dark matter and extraterrestrial life. Certainly, Indians will guide the world and divulge the mystery of planets and galaxies with possibility of life.

It brings joy to my heart with this vision that when the final frontier space is conquered, India will be the flag bearer and will lead the way in the quest. With this, I would like to thank every one at ISRO for making me and every Indian dream big and visualize India at the top most place in space.

Yours sincerely
Priyanshi Chauhan
